WS 101- INTRODUCTION TO WEB TECHNOLOGIES

FINALS ACTIVITY 2

ACTIVITY 1: Basic Output

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("cloud.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

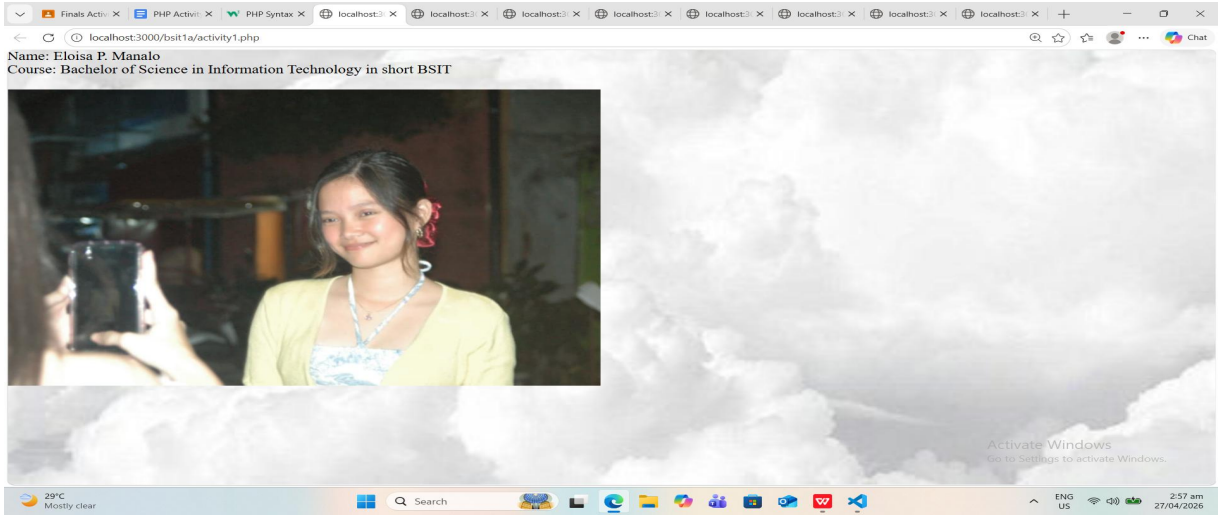
<body>

<?php
echo "Name: Eloisa P. Manalo <br>";
print "Course: Bachelor of Science in Information Technology in short BSIT";
?>

<br><br>

<img src="profile.jpg" alt="Profile picture" width="600">

</body>
</html>
```



Guide Questions:

1. What symbol is used to end a PHP statement?

The symbol to end a PHP statement is a semicolon.

2. Which is faster: echo or print?

Echo or echo is faster than print, because it does not return a value.

ACTIVITY 2: Multiple Outputs

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("cloud.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

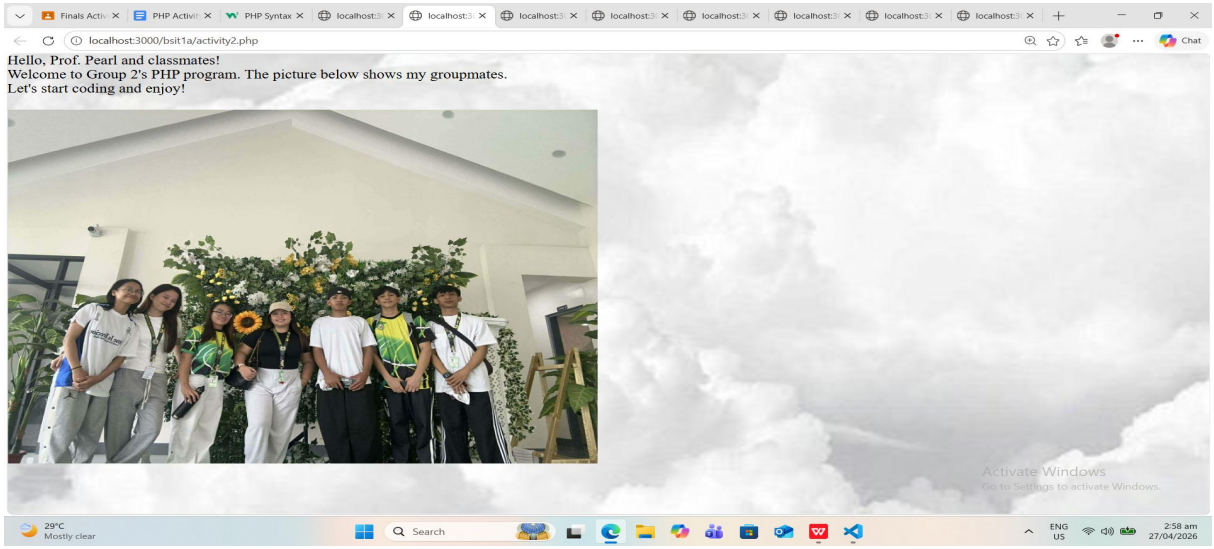
<body>

<?php
echo "Hello, Prof. Pearl and classmates!<br>";
echo "Welcome to Group 2's PHP program. The picture below shows my groupmates.<br>";
echo "Let's start coding and enjoy!";
?>

<br><br>

<img src="groupphoto.jpg" alt="Group photo" width="600">

</body>
</html>
```



PTC PHILOSOPHY: PTC advocate to give the students the opportunity to grow into **P**roficient, **T**echnologically competitive and **C**ompassionate adults
PTC VISION: The PTC envisions itself as an institution of higher learning which is strongly committed to the holistic development of the students to improve their lives in particular and the society in general.

ACTIVITY 3: Declaring Variables

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("cloud.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

<body>

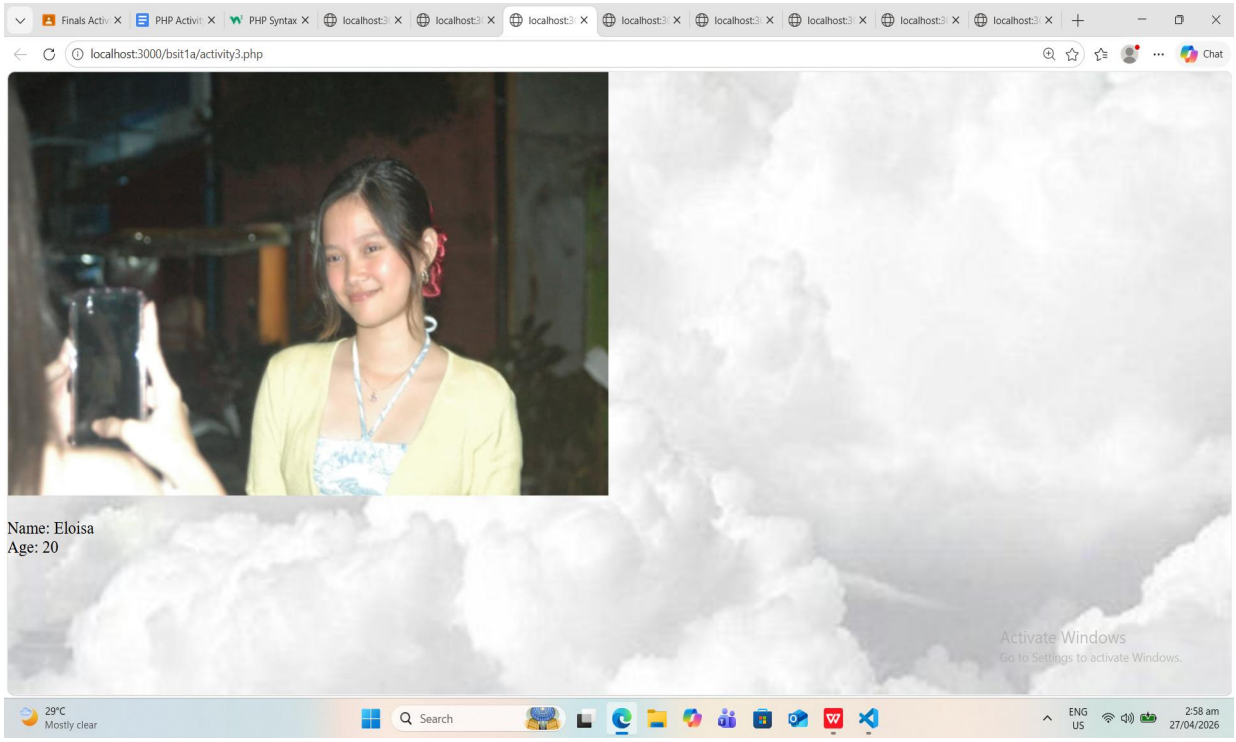
<img src="profile.jpg" alt="Profile picture" width="600">

<br><br>

<?php
$name = "Eloisa";
$age = 20;

echo "Name: " . $name . "<br>";
echo "Age: " . $age;
?>

</body>
</html>
```



ACTIVITY 4: Variable Rules

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("cloud.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

<body>

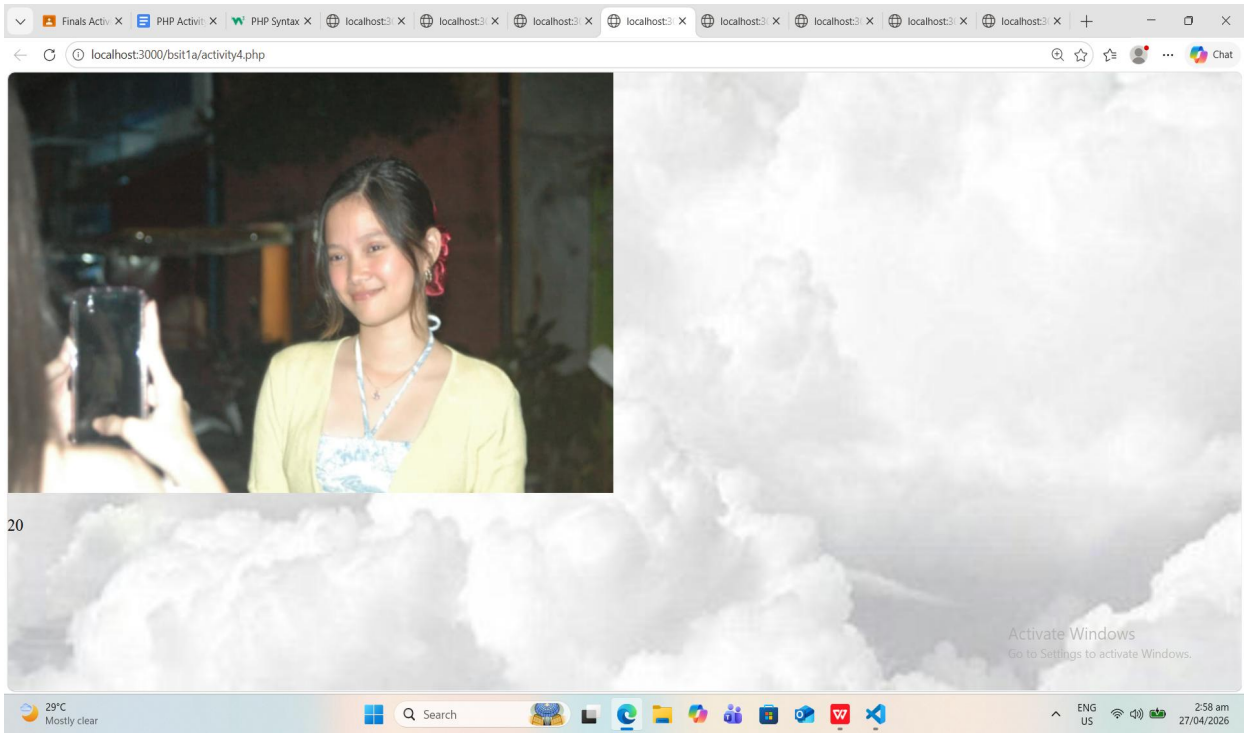
<img src="profile.jpg" alt="Profile picture" width="600">

<br><br>

<?php
$name = "Eloisa";
$Age = 20;

echo $Age;
?>

</body>
</html>
```



Expected Fix:

1. Variable names should not start with numbers

$1name variable names cannot start with a number.

2. Case sensitivity matters

$age should match $Age because PHP is a case-sensitive

ACTIVITY 5: Arithmetic Operators

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("lovemath.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

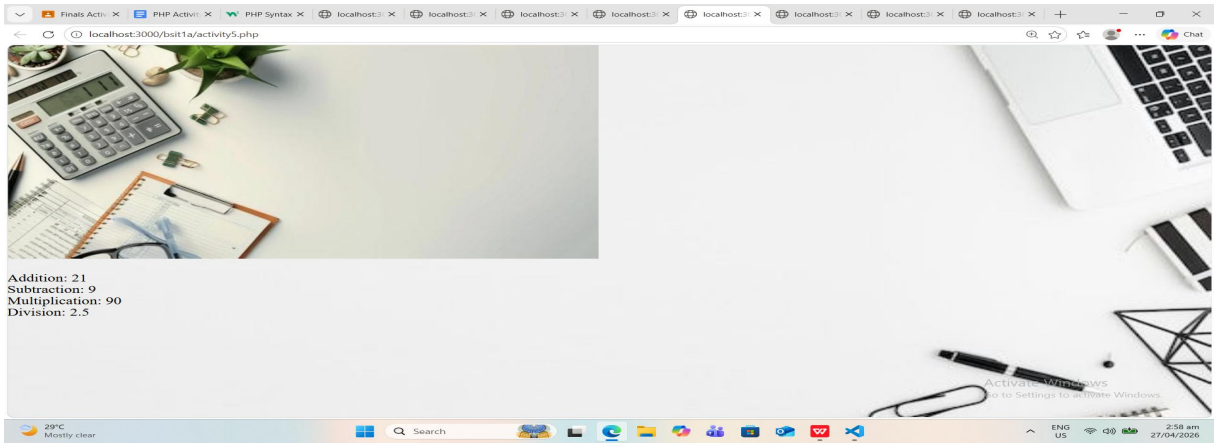
<body>

<img src="calcu.jpg" alt="Calculator" width="600">

<br><br>

<?php
$a = 15;
$b = 6;

echo "Addition: " . ($a + $b) . "<br>";
echo "Subtraction: " . ($a - $b) . "<br>";
echo "Multiplication: " . ($a * $b) . "<br>";
echo "Division: " . ($a / $b);
?>
</body>
</html>
```



ACTIVITY 6: Assignment Operators

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("lovemath.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

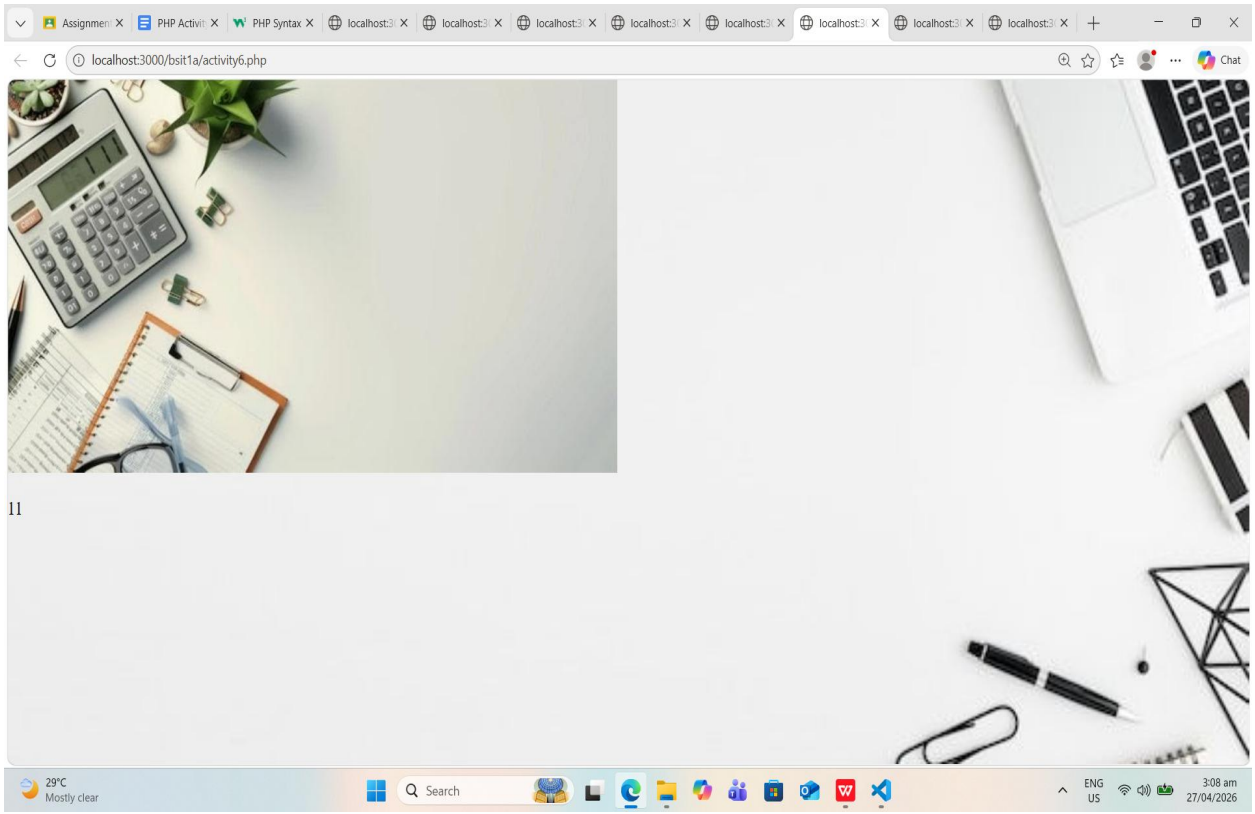
<body>

<img src="calcu.jpg" alt="Calculator" width="600">

<br><br>

<?php
$x = 7;
$x += 4;

echo $x;
?>
</body>
</html>
```



Question:

1. What will be the output?

11 , Why? $x += 4 means $x = 7 + 4

ACTIVITY 7: Comparison Operators

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("lovemath.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

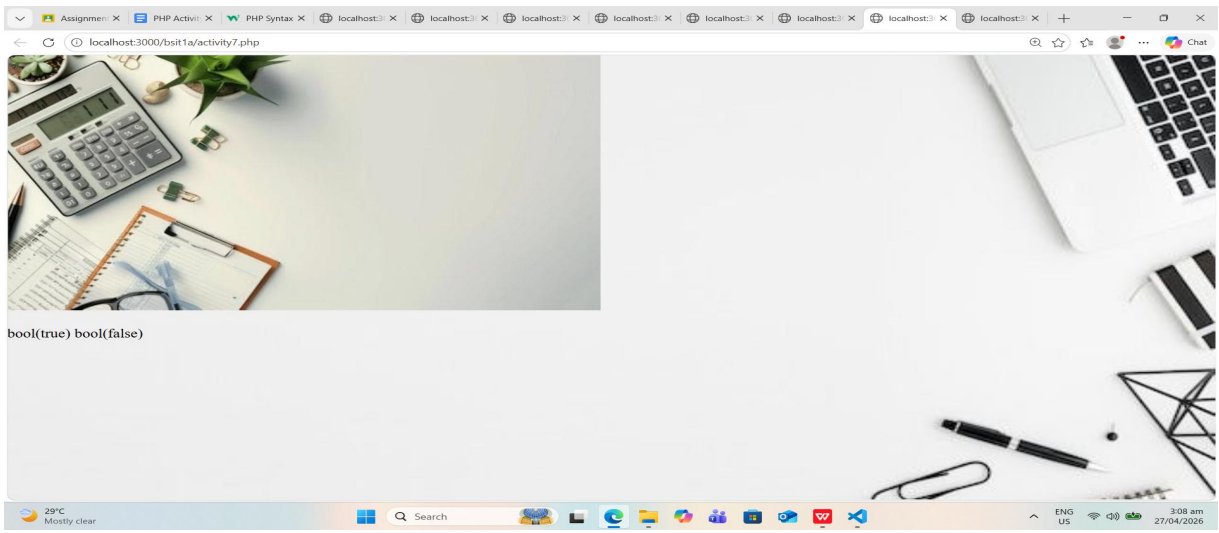
<body>

<img src="calcu.jpg" alt="Calculator" width="600">

<br><br>

<?php
$a = 12;
$b = 8;

var_dump($a > $b);
var_dump($a == $b);
?>
</body>
</html>
```



Given:

a = 12

b = 8

Output:

bool(true)

bool(false)

Why:

12 > 8 - TRUE

12 == 8 - FALSE

MINI PROJECT

```
<!DOCTYPE html>
<html>
<head>
   <style>
   html, body {
      height: 100%;
      margin: 0;
      background-image: url("lovemath.jpg");
      background-size: cover;
      background-repeat: no-repeat;
      background-position: center;
   }

   </style>
</head>

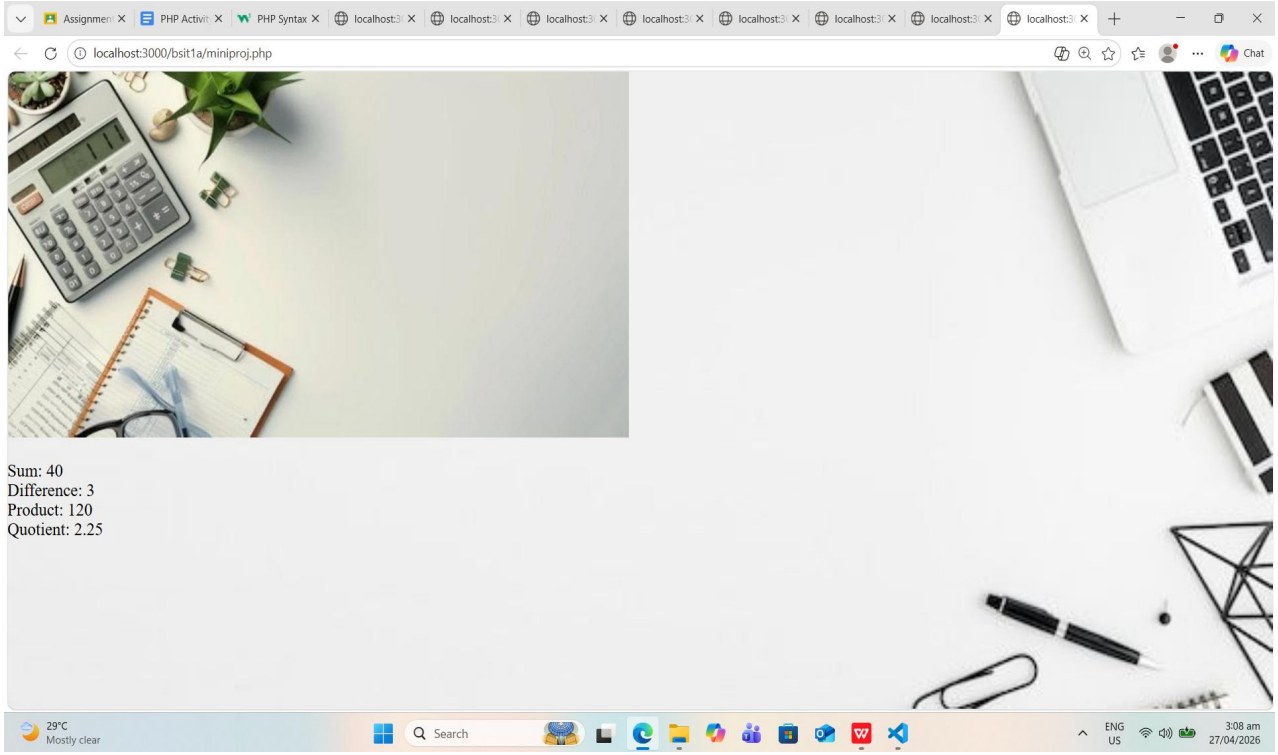
<body>

<img src="calcu.jpg" alt="Calculator" width="600">

<br><br>

<?php
$num1 = 10;
$num2 = 5;
$num3 = 12;
$num4 = 22;
$num5 = 18;
$num6 = 8;

echo "Sum: " . ($num5 + $num4) . "<br>";
echo "Difference: " . ($num6 - $num2) . "<br>";
echo "Product: " . ($num3 * $num1) . "<br>";
echo "Quotient: " . ($num5 / $num6);
?>
</body>
</html>
```



localhost:3000/bsit1a/miniproj.php
Sum: 40
Difference: 3
Product: 120
Quotient: 2.25
